we harvest

**NEU/NEW**

**UFT 64**

Underflooring wind flow turbine  
made by LWS Systems GmbH & Co. KG

**LWS Low-Wind-Speed-System**  
THE ORIGINAL | HANDCRAFTED IN GERMANY | PATENTED

## LWS P + P 500-12 AC Hybrid

In connection with the new hybrid inverter „LWS P+P 500-12 AC“ and the flow turbine, the loading of the turbine is maintained at the optimal working point by the characteristic curve set ex-works. With simultaneous solar energy the hybrid inverter extracts the sum of the maximum possible power from both systems, PV and wind.

## LWS UFT 64

The wind flow turbines – outstanding characteristics

- less inflow resistance
- complete recording of the roof turbulences at the suction points
- high rotational speed at the same wind speed
- a specially developed and formed turbine housing, LWS design
- suitable for polar and outback regions (made with special bearings)
- long life
- the optimal way to autarky
